SUMMARY

- As an enthusiastic Undergraduate Researcher and Software Developer with a 6-month academic internship, I bring a strong foundation in programming and data analysis. I am eager to contribute my technical expertise and collaborative spirit to your team, driving innovative solutions and advancing research initiatives. I am excited about the opportunity to grow and learn alongside talented professionals in a dynamic environment.

EXPERIENCE

- ❖ Undergraduate Researcher, BCI Campus Nov 2024 – Oct 2025
Sri Lanka
 - Developed a final-year individual research project using transformer-based ensemble models for stroke risk prediction.
 - Built a hybrid machine learning system integrating demographic and clinical data, achieving 92% classification accuracy.
 - Evaluated and optimized model performance using advanced ensemble techniques to improve prediction reliability.
 - Presented research findings to an academic panel and published the study in the university journal.
- ❖ Software Developer (6 months Academic Internship), Heaven'sCode (PVT) LTD Apr 2024 – Oct 2024
Negombo, Sri Lanka
 - Supported web development and business analysis activities across multiple commercial software projects.
 - Contributed as a Business Analyst to an AI-enabled fisheries mobile application in Sri Lanka, using image-based machine learning to assess Yellowfin Tuna export quality.
 - Assisted with requirements gathering, functional documentation, QA testing, and stakeholder coordination to ensure quality delivery.
- ❖ Data Entry Operator, SearchSpace GEO Aug 2022 – Dec 2023
Remote, Canada
 - Completed a university-offered data management project involving AWS, handling validation and maintenance of 10,000+ geographic data records with a strong focus on accuracy

EDUCATION

- ❖ BCI Campus 2021 – 2025
BSc (Hons) in Information Technology, Negombo, Sri Lanka
 - Graduated with Second Class (Upper Division)
 - CGPA: 3.46 / 4.0
- ❖ Aquinas College in Higher Studies 2023 – 2024
Aquinas Diploma in English Language and Literature, Colombo, Sri Lanka

SKILLS

Version Control Git	Agile Methodologies.....
Database Fundamentals.....	Cloud Familiarity (Azure)
Core of Object Oriented Programming.....	Team Collaboration.....

CERTIFICATIONS AND LICENSES

Microsoft Certified: Azure Fundamentals (AZ-900)
Cisco: Network Addressing and Basic Troubleshooting
Spring Boot 2.0 Essential Training

PROJECTS

Final year research project is a transformer-based ensemble models for stroke risk prediction using machine learning.

Following the SDLC, the project began with requirement analysis by collecting demographic, medical, lifestyle data and defining prediction objectives. In the design phase, data preprocessing pipelines, feature selection, and model architectures were planned. During implementation, multiple classifiers and ensemble methods were trained on the processed data. Testing involved evaluating model performance using metrics like accuracy, precision, recall, and AUC, with interpretability ensured through SHAP and LIME. Finally, the deployment and maintenance phases focus on prototype demonstration, clinical interpretability, and updating the model with new data to maintain reliability. Main functions consider during project Analyzed healthcare data to identify risk factors and system requirements. Designed data processing workflows and implemented machine learning models. Prepared system documentation, evaluation reports, and model performance summaries

Mobile App - AI-Driven Fish Quality Measurement Application

Built a mobile app using Python and OpenCV to classify yellowfin tuna quality. Automated visual inspection process, reducing manual effort by 70%. Collaborated with a cross-functional team to align the solution with industry standards and operational workflows in the Sri Lankan seafood export sector.

Web Application – Restaurant Management System

Angular, Node.js, MySQL led the frontend development using Angular, designing responsive UI/UX for table booking, order management, and menu navigation. Integrated Node.js APIs with MySQL for seamless data flow.

Web Application - The Bookstore App

Created a cross-platform app using Flutter (Dart) for browsing and purchasing books. Integrated Firebase for authentication, real-time database management, secure storage, and order/cart handling, delivering a smooth and scalable shopping experience.

Mobile App - Pizza Ordering System

Designed UI/UX and backend logic using Java and SQLite. Enabled real-time order tracking and delivery status updates
